

Nose dips: the smoothing window sets the count, not the ranking

Exp9 Batch 1, $n = 20$. Grey line is the shipped default of 5 frames; dashed line on the left panel is perfect agreement.

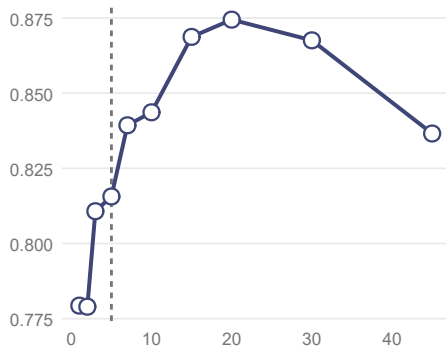

SLEAP / manual count ratio

Lin's concordance

Pearson r

integration_period (frames, half-width of the majority filter)

Batch 1 is the only batch with manual nose-dip scoring, so this cannot be checked anywhere else.
